Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Program Coordinator position within the Portland Housing Bureau. As a "bonesetter" for human-centric infrastructure, and a Master of Science candidate in Quantitative Methods and Modeling, I specialize in architecting the technical and operational bridges between C-suite strategy and front-line data integrity. With 14 years of leadership and a deep commitment to the Pacific Northwest, I am prepared to leverage my expertise in systems stabilization and data-driven advocacy to support Portland's housing stability initiatives.

Throughout my five years within high-concurrency healthcare ecosystems, I served as a strategic implementation architect during an enterprise-wide Epic migration for a system serving 18,000+ patients. Reporting directly to the CEO and COO, I directed technical advocacy to ensure that complex configurations aligned with clinical reality, ultimately improving resolution speed for data conflicts by 50%. This role required the precise interpretation of regulatory frameworks and the ability to translate abstract stakeholder requirements into high-performance, normalized data models, skills that are directly transferable to managing complex housing programs and grant compliance.

My technical engine is anchored by a rigorous academic foundation. In my recent graduate work, I engineered a contextual model using Poisson Regression to evaluate HIV prevalence drivers in New York City. This project identified a critical institutional mask in ZIP 11370 (Rikers Island) where standard socioeconomic models failed; by unmasking this anomaly, I demonstrated how noisy data models risk misallocating public resources. I bring this same level of analytical scrutiny to every project, ensuring that resource allocation is based on high-fidelity residential reality rather than institutional noise.

Beyond the data, I am a proven bridge-builder in multi-stakeholder environments. As an elected Union Delegate representing 300+ staff members, I navigated high-stakes contract negotiations and served as a neutral source of truth to resolve complex organizational disputes. My graduate research on healthcare system modeling further informs my approach to dismantling institutional silos to foster collaborative, mission-aligned outcomes.

I am relocating to Portland in June 2026 and am eager to apply my 14 years of leadership to ensure the operational integrity and equity of the Portland Housing Bureau's programs. I look forward to the opportunity to discuss how my background in systems stabilization and quantitative analysis can serve the City of Portland.

Thank you for your time and consideration.

Best regards,
William Preston 'Carey' Leslie II
