Hiring Manager & Selection Committee

Information Technology Services Department – ITS PMO
City of Beaverton
12725 SW Millikan Way, Beaverton, OR 97005

Subject: Application for Business Systems Analyst (Job Number: FY26/27-01181)

Dear Hiring Manager and Selection Committee,

I am writing to express my strong enthusiasm for the Business Systems Analyst position within the City of Beaverton's Information Technology Services Department (ITS PMO). Holding a Master of Science in Quantitative Methods & Modeling from Baruch College and over five years of experience managing enterprise application migrations, business process assessments, and organizational change, I am drawn to this opportunity to support your Public Works teams during the transition from Trimble Cityworks to Trimble Unity.

Throughout my career in high-concurrency operations and public service settings, I have specialized in diagnosing workflow bottlenecks, maintaining data integrity, and bridging the gap between technical software architectures and frontline staff. During a major enterprise platform migration from NextGen to Epic for an 18,000-user healthcare ecosystem at Callen-Lorde, I navigated core software architecture, audited source-to-destination database structures, and maintained rigorous data privacy controls. Following the initial rollout, I engineered a telemetry tracking system in Google Sheets to perform independent root-cause analysis on processing latency to isolate operational friction and authoring support playbooks that reduced clinical workflow latency by 50%.

I recognize that major software transitions succeed or fail based on user adoption, clear communication, and empathetic change management. As an elected 1199SEIU Union Delegate representing 300+ personnel, I served as a central liaison between operational staff and executive leadership—translating frontline feedback into structured technical and business requirements. I regularly designed and delivered hands-on staff training to help non-technical users navigate new business applications and adapt confidently to process changes. Furthermore, my background includes physical asset management system tracking at Del Monsoon, where I managed maintenance logs and deployment logistics for rental equipment and AV infrastructure with 100% inventory accountability, a discipline that aligns directly with Public Works enterprise asset management needs.

Working within regulated, high-impact environments has equipped me to navigate strict compliance and security frameworks. Whether auditing inter-agency records transfers, upholding EHR data privacy, or aligning with Criminal Justice Information Services (CJIS) and PCI standards, I hold firm compliance boundaries to ensure system integrity and data security.

I am eager to bring my quantitative rigor, business process analysis skills, and user-centered focus to the City of Beaverton's ITS PMO. Thank you for your time and consideration, and I look forward to the opportunity to discuss how my experience can support your team's projects.

Sincerely,
Preston Carey Leslie
