Dear Hiring Manager,

I am writing to express my strong interest in the Business Systems Administrator position at Omega Morgan, Inc. As I prepare for my upcoming relocation to the Pacific Northwest, I have been actively seeking roles where my technical background can make an immediate operational impact, and Omega Morgan's reputation as a regional leader in complex logistics and equipment solutions immediately stood out to me.

Holding a Master of Science in Quantitative Methods & Modeling from Baruch College, paired with 15 years of operational leadership and 5+ years of hands-on business systems administration, I specialize in configuring enterprise application workflows, verifying source-to-destination database field mappings, and administering data infrastructure to keep field and back-office operations aligned. Throughout my career, I have operated at the intersection of complex technical systems and frontline execution. During a major enterprise platform migration (NextGen to Epic) at Callen-Lorde, I audited core software architecture for an 18,000-user ecosystem, managing user access workflows and field mappings to preserve 100% data integrity across system records. Following system rollouts, I engineered automated telemetry tracking models in Excel/Google Sheets to diagnose bottlenecks, earning management praise for meticulous root-cause notes submitted across IT, PAS, and Patient Experience helpdesk tickets, ultimately reducing processing latency by 50%. Serving as an operational liaison for multidisciplinary staff, I translated role-specific UI variations across different user permission levels to resolve system friction and drive seamless adoption.

Omega Morgan's focus on complex logistics connects directly with my background in physical asset tracking. As Senior Program Operations Lead at Del Monsoon, I administered inventory management systems, maintenance logs, and field deliveries for physical rental equipment and AV infrastructure, maintaining 100% asset accountability and zero gear loss. Whether coordinating physical asset deployments or managing customer logic across 7 high-concurrency systems at The Standard Hotels, I bring dependable reliability, sound judgment under pressure, and a structured approach to system configuration and process automation.

Additionally, my technical toolkit, grounded in advanced SQL, Python scripting, automated ETL pipelines, and interactive BI reporting built in Tableau, Google Data Studio, and Dash/Plotly (skills that translate immediately into Power BI environments), enables me to turn operational telemetry into clear business intelligence.

I am excited about the prospect of establishing myself in the PNW and contributing to your team's continued growth. I would welcome the opportunity to discuss how my systems administration experience, physical asset management background, and dedication to clear communication can support Omega Morgan's operational goals. Thank you for your time and consideration.

Sincerely,

Preston Carey Leslie
