Dear Members of the Selection Committee,

I am writing to express my interest in the Data Analyst - Asset Reporting position within Costco's IT division. As a systems-oriented data translator holding an MS in Quantitative Methods and Modeling from Baruch College, my professional focus centers on data profiling, logical modeling, and transforming raw, disparate data streams into high-fidelity business intelligence. I am currently executing a permanent, self-funded relocation to the Greater Seattle Area with immediate, unencumbered availability to support Costco's large-scale IT infrastructure transformations.

Costco's well-documented culture of prioritizing its employees and members first reflects my own core philosophy: technology and data governance should always serve to optimize human and operational outcomes. The Asset Reporting lifecycle demands an analyst who can independently navigate legacy documentation, identify pipeline anomalies, and write advanced scripts to enforce master data quality. My background directly aligns with these technical and organizational mandates:

- **Data Profiling & Environment Integration:** Through my serverless architectural builds (CIP and WHO Projects), I manage multi-source ELT pipelines, write type-normalization logic, and handle streaming JSON variables. My hands-on experience designing conformed Kimball star schemas in Google BigQuery and utilizing dbt for advanced data mapping directly mirrors your requirement to architect and deploy reporting environments from the ground up.
- **Systemic Workflow Auditing & Operational Triage:** Within a complex 18,000-patient health ecosystem, I managed the daily resolution of 10–20 high-friction operational conflicts rooted in rigid institutional healthcare frameworks. Rather than touching backend architecture or relying on programming code, I leveraged expert front-end EHR systems navigation and systematic workflow auditing to protect data integrity. By designing an empirical tracking pipeline to log frontline operational outcomes, I successfully isolated an unflagged telephonic routing capacity failure, providing the definitive baseline data required for executive leadership to launch an entirely new call center division.
- **Requirements Gathering & Technical Documentation:** As an elected 1199SEIU Union Delegate representing over 300 personnel, I partnered directly with C-suite executives to interpret complex master agreements, gather cross-functional requirements, and resolve structural grievances. I excel at translating complex database limitations into comprehensive technical documentation, workflows, and actionable narratives for operators and executive stakeholders alike.

I possess a deep technical curiosity, a high degree of operational autonomy, and a commitment to rigorous quality control processes. I welcome the opportunity to discuss how my quantitative toolkit and systems-triage experience can protect and optimize Costco's global IT hardware and software asset pipelines. Thank you for your time, consideration, and leadership.

Best regards,

Preston Carey Leslie
