Re: Data Control Analyst (Transportation Maintenance) Application

Dear Hiring Team,

I am writing to express my strong interest in the Data Control Analyst position with Clackamas County's Department of Transportation & Development. As a detail-oriented data professional with 15 years of experience in data quality auditing, system navigation, and process improvement across 18,000-patient healthcare ecosystems and 100+ person decentralized teams, I am eager to apply my skills in data integrity, records management, and operational support to your Transportation Maintenance team.

Technically, I bring expertise in data quality control, database management, and workflow optimization. In my role at Callen-Lorde, I audited source-to-destination field mapping during an enterprise-wide EHR migration, managed data quality for an 18,000-user ecosystem, and engineered manual tracking systems to monitor capacity and resolve data routing failures. I also have extensive experience with digital records management, reconciliation, and running reports to identify and correct discrepancies, skills directly applicable to maintaining asset management data and supporting payroll processing.

Beyond the technical, I bring operational maturity and a commitment to teamwork. I have led cross-functional teams, trained incoming staff on system navigation and data entry standards, and developed resources and runbooks to support consistent data quality and operational efficiency. I understand that accurate, reliable data is the foundation of informed decision-making, and I take pride in ensuring that systems and processes work for the people who use them.

I am intentionally relocating to the Portland metro area and am excited about the opportunity to support Clackamas County's transportation operations. I would welcome the chance to discuss how my experience in data quality, records management, and cross-functional coordination can contribute to your team's success. Thank you for your time and consideration.

Sincerely,
Preston Carey Leslie
