Michael Strutyński, HR Manager II
King County Department of Human Resources
King Street Center – 201 S Jackson St
Seattle, WA 98104

RE: Application for Workforce Data Manager (Job # 2026MS27633)

Dear Michael Strutyński and Selection Committee,

I am writing to express my strong interest in the Workforce Data Manager position within the King County Department of Human Resources. As King County launches the King County Delivers plan and advances Executive Zahilay's Executive Order to strengthen governance and fiscal oversight, I am eager to contribute my background in business process analysis, performance metrics, and labor governance toward building transparent, human-centered HR data frameworks. While my current mailing address reflects my present residence in New York, I am actively preparing for a self-funded relocation to Washington State to establish my home and long-term career in the Seattle area, fully aligned with your hybrid onsite requirements.

My professional foundation spans 15 years at the intersection of frontline operations, qualitative research, and workforce advocacy. Having served as an elected 1199SEIU union delegate representing 300+ personnel alongside my operational roles, I bring deep respect for multistakeholder environments and a practical understanding of how workflow friction impacts employees. To complement this frontline operational leadership, I earned a Master of Science in Quantitative Methods and Modeling from Baruch College, where I built my core technical engine in SQL, Python data pipelines, and database architecture. This dual background enables me to speak fluent "tech" with IT partners like KCIT while remaining deeply grounded in operational realities and human-centered public service.

I am particularly excited to support King County DHR's priorities through proven operational and analytical approaches:

- **Granular Workforce Telemetry & Performance Measurement:** When standard supervisor tracking at Callen-Lorde only captured basic message counts and completed tasks in Epic, I independently stretched Google Sheets and Excel to build custom tracking systems. By logging unmeasured operational realities, such as outgoing call durations, in-person patient triage, and resolution bottlenecks, I generated the true operational telemetry needed to expose hidden friction and support evidence-based process improvement.
- **Qualitative & Quantitative Labor Reporting:** As a union delegate, I conducted on-the-ground interviews with staff impacted by workflow breakdowns and management decisions. I synthesized this frontline feedback into qualitative and quantitative internal reports for union leadership, framing complex issues clearly to set the stage for constructive, data-informed discussions with executive management.
- **Data Governance & Cross-Functional Alignment:** Grounded in formal quantitative modeling principles, I understand how to establish data inventory frameworks, conduct manual field-mapping audits during major system transitions, and enforce strict data privacy standards. I excel at bridging communication gaps between technical teams, program leaders, and staff to build capacity and promote a culture of continuous improvement.

Public sector workforce data represents people, resources, and community trust. I bring the quantitative literacy required to oversee complex data structures alongside the operational discipline and human empathy needed to ensure those systems serve employees and the public effectively.

My transition to the Seattle area is a deliberate personal priority, and I am prepared to align my relocation timeline immediately upon selection. Thank you for your time, consideration, and dedication to serving King County residents. I look forward to discussing how my background can support the HR Director's Office.

Sincerely,
Preston Carey Leslie
